Central Iron County Water Conservancy District

CHEKSHANI WATER IMPROVEMENT PROJECT UPDATE: OCTOBER 2020

The well drillers have reached 1,000 feet and are currently pumping the well to develop & clean the water.

We are very happy with the preliminary water chemistry test results which were around 450 TDS (total dissolved solids). That is a great improvement compared to about 1,600 TDS in the current Chekshani well. These tests have not yet been verified by a chemical lab, but we are optimistic!

The funding agency (USDA Rural Development) has encouraged us to wait a couple of months to bid the pipeline and well house to maximize the amount of grant dollars we could receive. They just finished their fiscal year and will be receiving new grant allowances at the first of the year. This is a delay on what we had initially proposed or hoped in providing water to the community by the first of the year. However, this will allow us to maximize more grant dollars and lessen the out of pocket cost to the community.

**THINGS ARE
LOOKING GREAT!**
